THE NEW WHITE GRAPE

NIAGARA.

HORTICULTURAL SOCIETY
JUN 8 1881
BOSTON.

first fruited

Originated by Hoag & Clark of Lockport, N. Y., in 1872, and is a cross between Concord and Cassady; bunch large, very compact; Berry large, semi-transparent, greenish white, bronzed in the sun; adheres well to the bunch; flesh tender, sweet and melting, with a fine aroma; skin tough and bears rough handling; as early as Hartford in ripening, but remains a long time on the vine in perfect condition after it is fully ripe; pronounced by leading grape men of superior quality; Foliage thick and healthy and will compare with either parent; vine a strong grower and entirely hardy. Bears heavily, even on young vines. Vines planted in open ground spring of 1878, are this year (1879) producing 25 bunches of fruit. Plants set spring of 1877, are producing 25 lbs. each. A vine four years planted, is carrying not less than 40 lbs. of superior fruit.

Due notice will be given when the vines will be offered for sale.

For any information apply to J. S. Woodward, Secretary of the Niagara Grape Co., Lockport, N. Y.
